

Principles for Our Sustainable Future
Questions for Council Candidates, August 9, 2017

Renewable water that serves our needs

We should understand, prioritize and develop dependable and renewable water supplies that serve our sustainable needs.

Climate-ready and affordable transportation

We should evolve our transportation system so all Tucsonans have access to safe, affordable, climate-friendly ways to connect to each other and to local businesses and services.

Relocalization and economic Redevelopment

We should focus our economic development efforts on serving local people and local businesses and on building local capacities.

~~Making sustainability our way of life~~

~~We should create a new story that we tell ourselves -- a story of a Tucson that is becoming an innovative, sustainable, desert-adapted community with a future as long as its past.~~
